

## dun·nage (dŭn'ij)

1. Loose packing material used to protect cargo from damage during transport.

At Core Solutions we strive to solve shipping problems through innovation in manufacturing. Over the past several years there have not been a lot of new products on the market that have been effective to aid manufacturers in cutting costs and time. Additionally the products that are available are not always specified correctly, or are not manufactured to meet the customer's need. CSI has taken note of these issues and we are going to great lengths to offer **real solutions** for manufacturers. We are manufacturing corrugated dunnage products with the utmost attention to detail and quality while making sure our product's performance meets the specific need for our clients.
